

Contents

Front Matter	v
Extension 0: Investigation of a Rubber Band	1
Fundamental 1: Measurable Properties	9
Extension 1.1: Kinetic Molecular Theory	15
Extension 1.2: Microscopic Gas Models	23
Fundamental 2: Counting Configurations	29
Fundamental 3: Driving Force	37
Extension 3: Binomial Distribution	43
Fundamental 4: Heat Transfer	47
Fundamental 5: Entropy	53
Extension 5.1: Stirling's Approximation	61
Extension 5.2: Temperature	69
Fundamental 6: Work	77
Fundamental 7: Variable Changes	85
Extension 7: Path Dependence	91
Fundamental 8: Energy Transformations	97
Fundamental 9: Microscopic Energy Changes	105
Fundamental 10: Processes	113
Extension 10: Cycles	121
Fundamental 11: Boundary Changes	127
Extension 11: Legendre Transforms	133

Fundamental 12: Laboratory Conditions	139
Extension 12: Working Equations	147
Fundamental 13: Composition Changes	153
Extension 13: More Cycles	159
Fundamental 14: Reaction Equilibrium	165
Extension 14: Temperature Dependence of Equilibrium	171
Fundamental 15: Phase Equilibrium	175
Extension 15: Phase Rule	181
Fundamental 16: Solution Equilibrium	185
Extension 16: Vapor-Solution Phase Diagrams	191
Fundamental 17: Colligative Properties	197
Extension 17: Solid-Solution Phase Diagrams	203
StatMech 1: Entropy & Probability	211
Extension SM1: Boltzmann Distribution	215
StatMech 2: Partition Function	221
StatMech 3: Translational Partition Function	231
StatMech 4: Molecular Partition Function	237
Kinetics 1: Introduction to Chemical Kinetics	245
Kinetics 2: Activation Energy	251
Kinetics 3: Transition State Theory	257
Appendix	261
